

Hitachi Rail Lucky Draw

Hitachi Rail Lucky Draw is a Next.js event draw app with a train-style rolling animation, prize-mode switching, birthday filtering, background selection, built-in BGM options, CSV-based data management, winner persistence, and a summary screen for completed draws.

Lucky Draw main screen

What It Does

- Runs a lucky draw with a train reel animation and prize-by-prize winner selection.
- Supports multiple draw modes based on CSV files in `public/`, such as `annual.csv` and `birthday.csv`.
- Filters participants by birthday window when Birthday Party mode is active.
- Lets operators switch the background image from available files in `public/backgrounds/`.
- Lets operators choose built-in BGM tracks from the settings panel.
- Persists mode, winners, mute state, birthday window, background, and BGM in browser local storage.
- Supports replacing employees and prize data from the UI by uploading CSV files.

Requirements

- Node.js 20+ recommended
- npm

No environment variable is required for the current local lucky draw flow. The checked-in `.env.example` comes from the original template, but this app does not currently read `GEMINI_API_KEY` or `APP_URL` during normal operation.

Install And Run

1. Install dependencies.

```
npm install
```

2. Start the development server.

```
npm run dev
```

3. Open the app.

```
http://localhost:3000
```

Production Commands

```
npm run build  
npm start
```

Main Features

1. Train draw screen

The main screen shows the active mode, the next prize, the number of participants left, the winner list so far, and the main **START** / **STOP** controls.

- **START** begins the rolling animation.
- **STOP** lands on a random eligible participant.
- **Reset** clears drawn winners for the current event.
- The speaker button mutes or unmutes all audio.

2. Draw mode switching

Modes are created from CSV files in `public/`. For example:

- `annual.csv` becomes the Annual Dinner mode
- `birthday.csv` becomes the Birthday Party mode
- any other file name becomes another mode

Open the settings panel from the top-right corner, then use **Draw Mode** to switch between available prize sets.

Switch draw mode

Important behavior:

- Switching mode clears the current winners list for the event.
- Background, mute state, BGM, and birthday month settings remain saved.

3. Birthday Party mode

When birthday mode is selected, the app filters participants using the birthday column from `employees.csv`.

You can adjust the birthday range in the settings panel:

- Quick presets: 2 Months and 3 Months
- Manual month range: Start and End
- Clear resets the filter to January through December

The panel also shows:

- how many employees match the selected birthday window
- a short preview of matching names

UPLOAD DATA ▾

Birthday filter settings

Birthday parsing notes:

- Recommended format: YYYY-MM-DD
- The filtering logic also tolerates values where the month and day can still be parsed correctly
- Employees with invalid or missing birthday values are excluded from birthday filtering

4. Background selection

Use the Background Image section in settings to switch the train backdrop.

Background selection

How it works:

- The app scans `public/backgrounds/` for `.png`, `.jpg`, `.jpeg`, and `.webp` files.
- It also recognizes root-level `public/background*.png|jpg|jpeg|webp` files.
- Your selected background is saved in local storage and restored on the next visit.

5. Background music

Use the `Background Music` section in settings to switch between the built-in tracks.

Background music selection

Current UI options:

- Upbeat
- Chill
- None

Notes:

- BGM pauses while the draw is running and resumes afterward.
- Browsers may require one user click before background music can start.
- There is no custom BGM upload button in the current UI. To add another BGM choice, place the audio file in `public/` and extend the `bgmOptions` list in `app/page.tsx`.

6. CSV and asset uploads

Use the Upload Data section in settings to replace event data directly from the browser.

UPLOAD DATA

Custom Background

Upload Background

Custom Employees

Upload employees.csv

Custom Prizes (.csv files)

Drop mode file (birthday.csv)

Name file as your mode e.g. "annual.csv". Refresh to apply.

Upload employees, prizes, and backgrounds

Available uploads:

- Upload Background: saves a custom background into `public/backgrounds/`
- Upload `employees.csv`: replaces the employee master list
- Drop mode file (`birthday.csv`): uploads any prize-mode CSV into `public/`

Notes:

- Uploading triggers a page reload so the latest files are picked up.
- Uploading a file with the same name overwrites the previous file.
- Mode names come from the CSV filename without the `.csv` extension.

Prepare Employee Data

The employee file must be named `employees.csv`.

Required columns

Column	Required	Description
<code>id</code>	Recommended	Unique identifier for each employee
<code>name</code>	Yes	Employee display name
<code>title</code>	Recommended	Job title or department label
<code>avatar</code>	Optional	Public image URL
<code>birthday</code>	Required for birthday mode	Birthday used for Birthday Party filtering

Recommended example

```
id,name,title,avatar,birthday
1,Alex Wong,Senior Engineer,https://i.pravatar.cc/150?u=alex,1990-01-14
2,Sarah Lee,Project Manager,https://i.pravatar.cc/150?u=sarah,1988-02-22
3,David Chen,Technician,https://i.pravatar.cc/150?u=david,1992-03-09
```

Employee data tips

- Use stable id values so winner persistence remains predictable.
- Keep avatar URLs publicly accessible.
- Use valid dates if you plan to use Birthday Party mode.
- If avatar is empty, the UI falls back to a placeholder profile.

Prepare Prize Mode Data

Each non-employee CSV file in `public/` becomes one draw mode.

Examples:

- `annual.csv`
- `birthday.csv`
- `family_day.csv`
- `staff_awards.csv`

Required columns

Column	Required	Description
id	Recommended	Prize identifier
name	Yes	Prize name shown in the UI
image	Optional	Prize image URL
quantity	Yes	Number of winners for this prize row

Recommended example

```
id,name,image,quantity
1,Third Prize: AirPods Pro,https://images.unsplash.com/photo-1600294037681-c80b4cb5b434?w=400&h=400&fit=crop,5
2,Second Prize: iPad Air,https://images.unsplash.com/photo-1544244015-0df4b3ffc6b0?w=400&h=400&fit=crop,3
3,Grand Prize: iPhone 15,https://images.unsplash.com/photo-1695048133142-1a20484d2569?w=400&h=400&fit=crop,1
```

Prize mode tips

- `quantity` expands a row into repeated prizes internally.
- If `quantity` is missing or invalid, the app treats it as 1.
- The draw is complete when all prize entries in the active mode have been used.
- If no eligible employees remain, the main button changes to NO PASSENGERS.

Default Data Files

The repository already includes starter data under `public/`:

- `employees.csv`
- `annual.csv`
- `birthday.csv`
- `upbeat.mp3`
- `chill.mp3`
- `backgrounds/`

These files are enough to run the app immediately after `npm install`.

Typical Operator Flow

1. Start the app with `npm run dev`.
2. Open `http://localhost:3000`.
3. Open settings and choose the draw mode.
4. If using Birthday Party mode, set the birthday month range.
5. Change the background and BGM if needed.
6. Upload a fresh `employees.csv` or event prize CSV if the event data changed.
7. Run the draw with `START` and `STOP`.
8. Use `VIEW ALL WINNERS` after the final prize is drawn.

Birthday mode main screen

Persistence And Reset Behavior

The app stores these values in browser local storage:

- selected mode
- selected background
- selected BGM
- mute state
- birthday month range
- winner history

Reset clears the winner history for the current event, but it does not reset your saved background, mode, mute state, or BGM choice.

Regenerate README Screenshots

The screenshots in this README were generated with Playwright and saved into `public/docs/`.

If the UI changes, regenerate them with:

```
npm run docs:screenshots
```

Make sure the app is already running at `http://localhost:3000` before executing the screenshot command.
